WIRELESS DEADBOLTS

Smart & Interconnected Wireless Deadbolt Locks

The Marks Wireless Deadbolt Series delivers key-free convenience, dependable security, & long-lasting performance— hallmarks of the Marks USA brand. Designed for property managers, building owners, and multifamily applications, these Smart & Interconnected Deadbolt models feature one-motion egress, BLE Bluetooth plus optional Prox or MIFare credential support for flexible access, providing a seamless and intuitive user experience.

Integrated with NAPCO smart security platforms, the Marks Wireless Deadbolt Series provides secure, keyless operation while eliminating the expense and hassle of key management. Users can adjust personal access settings— such as unlock range— directly from their phone, ensuring both convenience and safety.

Built for new construction or retrofit projects, with minimal door prep, they combine rugged deadbolt reliability with modern smart-access functionality for today's evolving multifamily/multi-tenant market.

Deadbolt Features

- No Cylinder - For Pick-proof security
- BLE Bluetooth Credential Support
- Prox Reader Options for ID cards/fobs
- Clutching outside turnpiece design - Provides extended battery life for less maintenance
- ADA compliant - UL Listed 
- Field reversible
- Weather-Resistant

Smart Electronics: Enterprise CA4K, MVP® Access Cloud or MVP EZ App Management

Marks Wireless Deadbolt Series Locks blend architecturally-pleasing aesthetics with Napco's own advanced, scalable, proven, access-control locking platforms including new MVP Enterprise and MVP-EZ App Cloud-Based solutions.

These Smart Deadbolts, as well as Napco Access Control Panels & wireless lock Gateways, are interoperable with either our MVP Access Cloud or on-prem CA4K Enterprise head end access platforms and can be managed from web browsers or mobile apps. Our MVP Access, MVP EZ and CA4K Access mobile apps provide multiple ways to interact with our access management platforms. All three apps also support our MobileLink technology to allow configuration and data exchange via a mobile device without any IT infrastructure. The iLock app is designed for end users who desire a simple one button app for utilizing BLE credentials to access their doors.

Wirelessly & labor-free, updates, credential changes (125kHz Prox or 13.56 MHz MIFare), scheduled routines, & time-/date-stamped audit trail queries don't require going door to door. All can be securely made over the wireless network, on-demand, or set schedule. Lock programming can also be done via smartphone or tablet via Bluetooth connection.

Proven, low maintenance with durable Marks hardware & superior battery-life.

Platform-Networked Specifications:

- Supports up to 5000 Key-free users
- Multiple Access Technologies supported (platform-dependent), i.e., prox, fob, smart cards (Standard Prox or MIFare/EV1/EV2/EV3, see ordering**), or iLock® for MVP App, MVP EZ App, for Mobile Access credential via Smartphone
- Customizable UnLock Range on Phone App - Optimize convenience & security based on preference.
- Manual credential enrollment capability (limited)
- Supports 254 time schedules and 30 holidays held in the lock.
- 4 Construction Modes Available (see usage in Operations Guide OI445LF)
- Provides 7,000 Event Audit Trail, with time- and date-stamp of access by user (stored in the lock)
- Long Battery Life with 4 AA Batteries - Up to 3 years for low maintenance (actual span dependent on operation frequency, programming & credential types)
- Convenient Bluetooth, Prox or MiFare Advanced Security-Tech Credentials, ID, Fob & Phone
- 300+ Architectural lever designs & 2 Reader Styles (see ordering info)
- Built-in wireless capability supports programming via Gen 3 Networx Gateways (in Ethernet/802.11 or POE models)
- Long-range wireless programming
- MobileLink™ Phone Sync - Available on select models, MobileLink in the MVP Access or EZ App enables users to unlock doors and transfer data via Bluetooth, even without an internet connection. It securely syncs lock updates, including firmware, in Offline Mode, eliminating the need for a Gateway for RF communication for simplified, efficient lock management.
